Remarques

Cette liste n'est pas exhaustive. Il est tout à fait possible que les types de connecteurs qu'il comporte ne soient plus disponibles. Et que de nouveaux types de connecteurs font défaut.

Avec les nouveaux développements, les fabricants de connecteurs s'en tiennent en principe toujours à la taille. Parce que ces connecteurs sont utilisés dans toutes sortes de boîtiers. On peut donc supposer que la combinaison de la marque du connecteur et du type d'adaptateur reste la même.
